

APPARATUS AND METHOD FOR CREATING SIGNAL AND
PROFILES AT A RECEIVING STATION

ABSTRACT

Apparatus, and an associated method, for creating a profile
5 associated with burst data signals communicated to a base station
of a fixed wireless access communication system. The profile is
created to facilitate receive operations performed upon subsequent
bursts of the burst data signal. The profile is stored at a
storage device and retrieved when subsequent bursts of the bursts
10 data signal are received at the base station.
